AI Summary

The page content and images display no direct or indirect indicators of gambling. Keywords such as betting, sportsbook, casino, odds, wager, deposit, withdraw, bonus bet, or free spins are absent. Generic terms like "win" are used exclusively in the context of software development and productivity (e.g., "Write, test, and fix code quickly"), not related to real-money wagering or chance-based games. The page focuses on development tools, AI, and collaboration without any gambling-related elements.

Built-in application security where found means fixed

Use AI to find and fix vulnerabilities so your team can ship
more secure software faster.

Apply fixes in seconds. Spend less
time debugging and more time
building features with Copilot Autofix.

[Explore GitHub Advanced Security >](#)

github-advanced-security (bot)

The vulnerability in the code is due to the fact that user-provided input is directly used in HTTP response without any sanitization. This can lead to a cross-site scripting (XSS) attack if the user input contains malicious scripts.

To fix this, we need to sanitize the input before using it in the HTTP response. One way to do this is to use the `escape-html` library, which can escape any special characters.

Copilot Autofix (AI)

```
14 app.get('/', (req, res) => {  
15   -   res.send('Hello ${req.query.name}!');  
15   +   res.send('Hello ${escape(req.query.name)}!');  
16 });
```

Security debt, solved. Leverage security
campaigns and Copilot Autofix to reduce
application vulnerabilities.

New rendering engine #920

Open 1/3 sub-issues

exactlymyra commented 5 days ago

Epic description

Now that we've decided on our new rendering engine (see #824), we have some follow-up work to do. Let's use this issue for tracking. I've taken a first pass at outstanding to-dos here.

1/3 Sub-issues

Update collision logic #1752

Engine prototype (physics, rendering) #1753

Events / GitHub Roadmap Webinar, Q1 2026

GitHub Roadmap Webinar Q1 2026

March 25 at 8am PT | 11am ET | 5pm CET

The future of the AI-powered SDLC: Velocity, quality, and governance at scale

Software development is entering a new phase as AI evolves from assistive tooling to agentic systems operating across the full software development lifecycle. Join GitHub's chief product officer for a Q1 2026 roadmap session outlining how GitHub is evolving into a fully AI-powered SDLC platform.

This 60 minute session connects recently shipped innovations with near-term roadmap investments across GitHub and GitHub Copilot. Through product walkthroughs, you'll see how agentic capabilities are accelerating developer workflows, how intelligent AI features are improving quality and efficiency, and how platform-level governance investments provide the visibility and control organizations need to adopt AI confidently at scale.

You'll hear directly from the GitHub product team on how these capabilities work together as an integrated platform—delivering velocity, quality, and governance without compromising developer choice.

Whether teams work in their preferred IDE, the CLI, or across environments, GitHub continues to support flexibility without locking organizations into a single model or workflow.

In this session, you'll learn:

- How GitHub is evolving to support an AI-powered SDLC
- What's recently shipped and what's coming next across GitHub and Copilot
- How agentic capabilities are shaping planning, coding, review, and operations
- How GitHub integrates security and governance directly into AI-powered workflows

Designed for developers, engineering leaders, and platform teams, this session provides a clear mental model for GitHub's role in the agentic SDLC era. The webinar includes time for live Q&A with the product team.
